CANNED CLING PEACHES

F.O.B. PRICE RELATIONSHIPS, 1924-25 to 1952-53

Sidney Hoos

Introduction

This report is being issued in response to a request of the Cling Peach Advisory Board. The report's objective is to provide the various participants in the canned cling peach industry--growers, packers, distributors, and purchasers--with economic and marketing information. Such information, including statistical data on packs, shipments, carry-overs, f.o.b. prices and their relations to the major factors affecting them, is used by the Cling Peach Advisory Board in its consideration and formulation of recommendations to the Director of the California Department of Agriculture.

The analysis of f.o.b. price relationships summarized in this report includes several aspects introduced to strengthen the analysis and its results. These aspects may be briefly indicated as follows: The index of competing canned fruit prices has been broadened by adding canned fruit cocktail and canned freestone peaches to the three fruits--canned apricots, canned pears, and canned pineapple--previously included in the index. The weights applied to the prices in the index of competing canned fruit prices have been revised to reflect the current relative importance of the various canned fruits. The index of United States nonagricultural income previously used has been replaced by an index of the United States disposable personal income. Finally, the base periods for the index of competing canned fruit prices and for the income index were shifted from 1935-1939 to 1947-1949. Since the details of these changes were discussed in an earlier report,^{1/} they are not discussed further here.

$$x^2 + y^2 = 1$$

1. The first point to be made is that the concept of a "good" is not a simple one. It is a complex one, and it is one that has been the subject of much philosophical discussion. In this paper, we will explore the concept of a "good" in the context of the philosophy of Aristotle. We will begin by discussing the concept of a "good" in general, and then we will turn to the specific concept of a "good" as defined by Aristotle. We will then discuss the role of the "good" in Aristotle's ethics, and finally we will discuss the implications of Aristotle's theory of the "good" for contemporary philosophy.

1. The purpose of this study is to determine the effect of the use of the word "and" on the comprehension of a sentence. The study was conducted with 100 subjects, 50 males and 50 females, aged 18 to 25 years. The subjects were divided into two groups of 50 each. The first group was given a sentence with the word "and" and the second group was given a sentence without the word "and". The subjects were then asked to read the sentence and to indicate whether they understood the meaning of the sentence. The results of the study showed that the subjects in the first group (with the word "and") had a higher comprehension rate than the subjects in the second group (without the word "and").

The period covered by this report begins with the 1924-25 marketing season and ends with the 1952-53 season. The war years, 1941-42 through 1945-46, are excluded from the analysis because of the abnormal conditions prevailing then, such as price controls; 1946-47 was excluded since a large proportion of canners' shipments that year went into refilling the supply pipe line rather than into consumers' hands.

Results

The f.o.b. prices which reflect the average industry experience during 1952-53 may be summarized as follows:

Canned fruit	Choice No. 2½	Average of all grades and sizes
	dollars per case	
California cling peaches	5.32	4.84
California apricots	5.68	4.94
Pacific Coast pears	6.49	5.39
California freestone (Elberta) peaches	5.75	--
California fruit cocktail	6.41	5.56

The price of Hawaiian pineapple (sliced, fancy, No. 2½, f.o.b. San Francisco) averaged \$6.85 per case for 1952-53.

The prices for all of the above canned fruits, except pineapple, averaged less in 1952-53 than in the previous marketing year 1951-52 (see Table 3). The increase of 5 cents per case in the pineapple was due to increased transfer costs from Hawaii to San Francisco; the Honolulu price remained unchanged.

The authors of this document have been working for some time on the development of a new system of accounting for the various types of business transactions. The system is based on the principle of the "double entry" system, which is the basis of all modern accounting. The system is designed to be simple and easy to use, and it is hoped that it will be found to be of great value to all those who are interested in the subject.

The system is based on the principle of the "double entry" system, which is the basis of all modern accounting. The system is designed to be simple and easy to use, and it is hoped that it will be found to be of great value to all those who are interested in the subject.

Account Name		Debit	Credit
Capital			100.00
Profit			20.00
Loss		20.00	
Dividend		20.00	
Retained Earnings			80.00

The system is based on the principle of the "double entry" system, which is the basis of all modern accounting. The system is designed to be simple and easy to use, and it is hoped that it will be found to be of great value to all those who are interested in the subject.

The movement of canned fruit from California canners during 1952-53 is given in detail in the appended tables. But the following summary table indicates the high lights:

Canned fruits	Movement from canners	
	Total	Domestic commercial
	thousands of cases; 24 No. 2½ basis	
California cling peaches	16,224	14,519
California apricots	3,910	3,196
Pacific Coast pears	6,199	5,704
California freestone peaches	2,519	2,419
California fruit cocktail	8,698	7,179

In addition, it is estimated that some 12,500,000 cases of pineapple moved into trade channels through packers' and importers' shipments for domestic civilian consumption.

In the 1952-53 season, f.o.b. total domestic commercial shipments of the six canned fruits exceeded the figure of any previous year. There was an increase of as much as 5 million cases above the figure for the previous year (see Table 5). All of the canned fruits, except apricots, shared in the increase; and apricot shipments were only slightly under those of 1951-52. The decrease in f.o.b. prices compared with the previous year, along with the higher level attained by national income, contributed to the increased movement.

In addition to providing the basic marketing information summarized above and in the attached tables, this report presents the results of statistical analyses of the major factors which are related to the industry average f.o.b. prices of canned cling peaches. Such major factors include the

1. The first of these is the fact that the Commission has not yet received any information from the Government of the United Kingdom regarding the proposed changes to the law of the United Kingdom in relation to the treatment of the British Commonwealth countries. It is therefore not possible for the Commission to make any recommendations on this matter at the present time.

CONFIDENTIAL

domestic commercial movement of canned clings from California canneries, the level of national disposable personal income, and the relative level of prices of canned fruits competing with canned clingstone peaches. Those price-influencing factors are shown in Table 1 appended to this report. The f.o.b. price relationships may be summarized as follows:

A change of 1,000,000 cases (24 No. $2\frac{1}{2}$ basis) in the commercial domestic movement of California canned cling peaches, considered by itself, was on the average accompanied by a change in the opposite direction of about 15 cents a case in the f.o.b. price (choice No. $2\frac{1}{2}$) of canned cling peaches.

An increase of 10 per cent in the index of disposable income, considered by itself, was on the average accompanied by an increase of about 37 cents a case in the f.o.b. price (choice No. $2\frac{1}{2}$) of canned cling peaches.

A change of 10 points in the adjusted index of prices of competing canned fruits, considered by itself, was on the average accompanied by a change in the same direction of about 22 cents a case in the f.o.b. price (choice No. $2\frac{1}{2}$) of canned clingstone peaches.

Differences between the actual f.o.b. prices of canned cling peaches (choice No. $2\frac{1}{2}$) and those explained by the statistical analysis are given in Table 2 of this report.

Data

Although the sources of the data on which the report is based are indicated in the footnotes of the various tables, the following supplementary explanations may be noted for the 1952-53 prices, movement data, and other economic information used in the analysis.

The following information was obtained from the records of the Federal Bureau of Investigation:

[The remainder of the page contains several lines of extremely faint, illegible text.]

1. The first of these is the fact that the Commission has not yet received any information from the Government of the United States regarding the activities of the Committee for the Liberation of the People of the South (CLPS) in the United States. The Commission is therefore unable to determine whether the CLPS is a genuine organization or a front organization for the United States government.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific information required.

[illegible]

1. The above information was obtained from the files of the Federal Bureau of Investigation, Department of Justice, and is being furnished to you for your information.

There is no record of the date on which the record is made and the date on which the record is made is not known.

The f.o.b. price of canned cling peaches used in this report is an industry average price; it is based on records of canneries and reflects actual operations of the canners packing cling peaches in California. The same is true for the f.o.b. prices for canned apricots and for canned fruit cocktail. The f.o.b. price for canned pears is also an industry average price reflecting actual experience of the canneries, but the pear price reflects operations of canneries in the Pacific Northwest as well as in California. The canned pear price for the Northwest was made available through the Northwest Canners Association and that for California was made available through the Canners League of California. The basic price data for canned apricots were also made available through the Canners League of California. The basic price data for cling peaches and fruit cocktail were made available through the Cling Peach Advisory Board. The price data for freestone peaches and Hawaiian pineapple are based on published quotations supplemented by trade information.

The 1952-53 prices referred to above and used in the analysis are preliminary. This is so because they reflect industry experience for the eleven-month period from June 1, 1952 through April 30, 1953. The trend of market developments during the month of May 1953, however, suggests that the prices used and given in this report for 1952-53 are representative and indicative of the price experience during the 1952-53 marketing year.

The canner movement data for 1952-53 are preliminary since they include estimates for the final months of the marketing year. For cling peaches and fruit cocktail, the May 1953 movement was estimated to be equal to that of April 1953, the latter figure being derived from April 1, 1953 canners' stocks compiled and issued by the Canners League of California and the May 1, 1953

The Civil War of 1861-1865 was a period of intense political and military conflict in the United States. It was a time of great suffering and sacrifice, and it resulted in the preservation of the Union. The war was fought between the Northern States, which were opposed to slavery, and the Southern States, which were in favor of it. The war ended with the victory of the North, and it led to the abolition of slavery in the United States.

canners' stocks compiled and issued by the Cling Peach Advisory Board. For apricots and freestone peaches, the movement during each of the months, April and May 1953, was estimated to equal to the average monthly movement during the period December 1952 through March 1953 and was based on the December 1, 1952 and April 1, 1953 canners' stock figures compiled and issued by the Canners League of California. For Pacific Coast canned pears, the procedure was the same as for apricots and freestone peaches but with the California movement data supplemented by that of the Northwest as derived from canners' stock figures issued and compiled by the Northwest Canners Association. The movement data for Hawaiian pineapple were derived from trade sources.

The index of United States disposable personal income is based on reports issued by the U. S. Department of Commerce. In the disposable income figures used for 1952-53 in the analysis, it has been necessary to estimate the value for May 1953 since it has not yet been published; it has been estimated at the level prevailing during the previous month of April 1953. The level of competing canned fruit prices is measured by an index constructed as indicated in Table 4 appended to this report.

National disposable income advanced during the past year; the figure for 1952-53 is estimated at 242 billion dollars compared with 230 billion dollars in the previous year. The general level of prices of canned fruits competing with canned clings declined during the year, the decline being reflected in the competing canned fruit prices index which dropped seven points from 85 in 1951-52 to 77 in 1952-53.

1. The first step in the process of the investigation is the identification of the problem. This is done by the investigator who is assigned to the case. The investigator must first identify the problem and then determine the scope of the investigation. This is done by the investigator who is assigned to the case. The investigator must first identify the problem and then determine the scope of the investigation. This is done by the investigator who is assigned to the case.

Technical Note

With price as the dependent variable and the three other variables below considered as the independent variables, the multiple linear regression equation fitted by the method of least squares to the series covering the years, 1924-25 through 1952-53 (excluding 1941-42 through 1946-47), is:

$$X_1 = -13.203435 - \frac{0.155410}{\substack{(3.825959) \\ [-0.430566]}} (X_2) + \frac{8.996382}{\substack{(18.387566) \\ [+1.932057]}} (\log_{10} X_3) + \frac{0.022106}{\substack{(7.617561) \\ [0.859793]}} (X_4);$$

where:

X_1 is the annual average f.o.b. price (choice No. 2 $\frac{1}{2}$) of California canned cling peaches (dollars per case), Table 1, column 1.

X_2 is the canners' commercial domestic movement of California canned cling peaches (in units of 1,000,000 cases), Table 1, column 2.

X_3 is the index of United States disposable personal income (1947-1949 = 100), Table 1, column 3.

X_4 is the adjusted index of prices of competing canned fruits (1947-1949 = 100), Table 1, column 4.

The figures in parentheses are t-ratios of the net regression coefficients.

The figures in brackets are beta coefficients.

The adjusted coefficient of multiple correlation is $\bar{R}_{X_1, X_2, \log_{10} X_3, X_4} = 0.976$.

^{a/} Excludes government school lunch purchases of 865,000 cases in June, 1949-March, 1950, and an additional 331,000 cases in April, 1950. If school lunch purchases were included, total movement would be 17,528,219 cases.

^{b/} Excludes government purchases of 1,172,766 cases. If government purchases were included, total movement would be 15,943,675 cases.

^{c/} Excludes government purchases of 2,180,000 cases (1,734,000 quartermaster and 446,000 school lunch). If government purchases were included, total movement would be 16,258,400 cases.

^{d/} Preliminary; subject to revision.

(Continued on next page.)

14

1. The first part of the document is a letter from the President of the United States to the Congress, dated January 1, 1861. It is a very important document, as it contains the President's message to the Congress at the beginning of his first term. The letter is written in a very formal and dignified style, and it is one of the most important documents in the history of the United States.

Table 6 continued.

e/ Excludes government purchases of 1,166,000 cases (960,000 quartermaster and 206,000 school lunch). If government purchases were included, total movement would be 16,224,000 cases.
